The Single precision A X plus Y (saxpy)

$$z_i = a \cdot x_i + y_i, \quad \forall i \in 1, N, a \in \mathbb{R}$$

```
void saxpy(float* tabResult, float scal, const float * tabX, const float* tabY, long unsigned int nbElement){  
    for(long unsigned int i(0lu); i < nbElement; ++i){  
        tabResult[i] = scal*tabX[i] + tabY[i];  
    }  
}
```

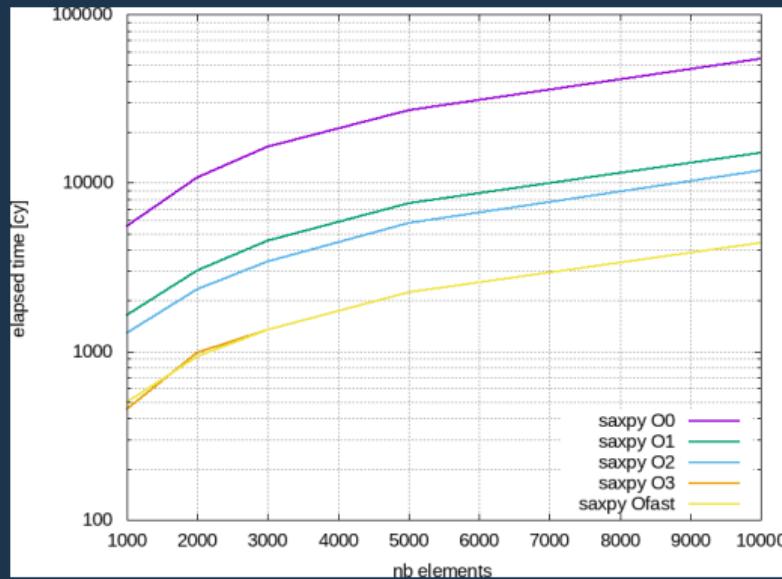

The Single precision A X plus Y (saxpy)

You already know how to make the performances test !

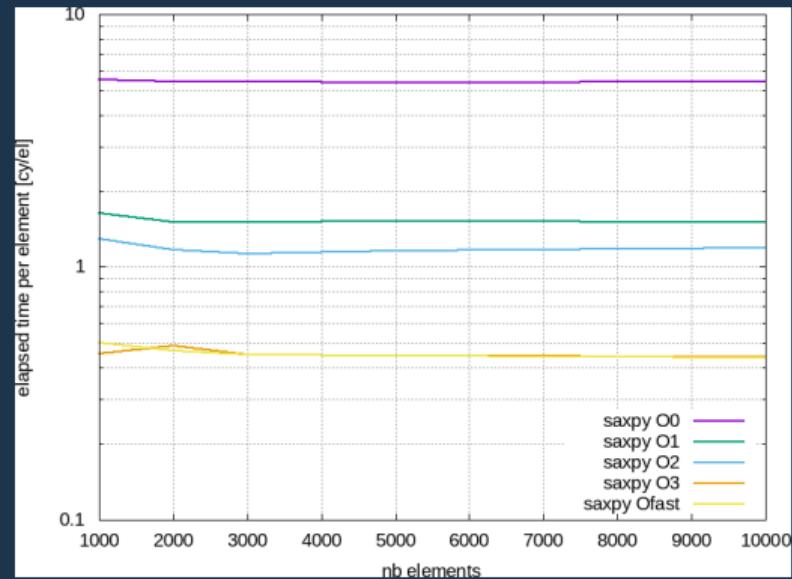

- ▶ Do not forget :
 - ▶ To include **asterics_hpc.h** in the **main.cpp**
 - ▶ To call **target_link_libraries(saxpy_O3 asterics_hpc)**

The Saxpy : base performances

Total Elapsed Time (cy)

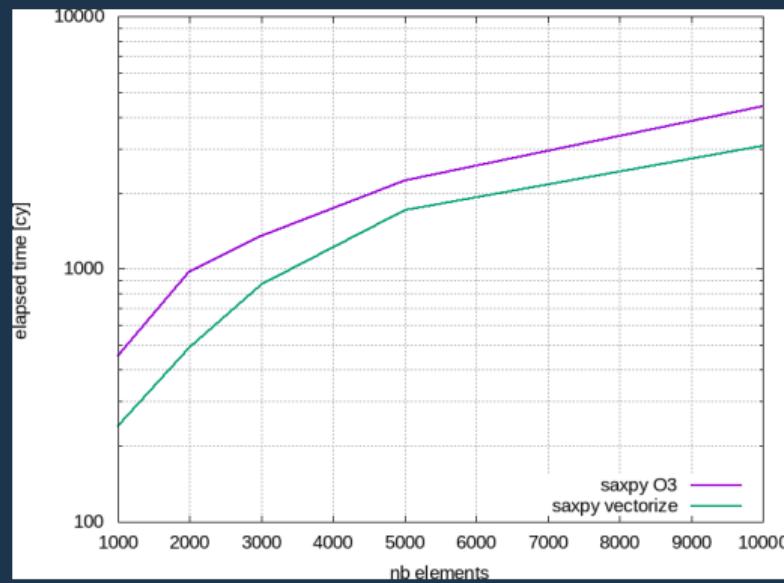

Elapsed Time per element (cy/el)

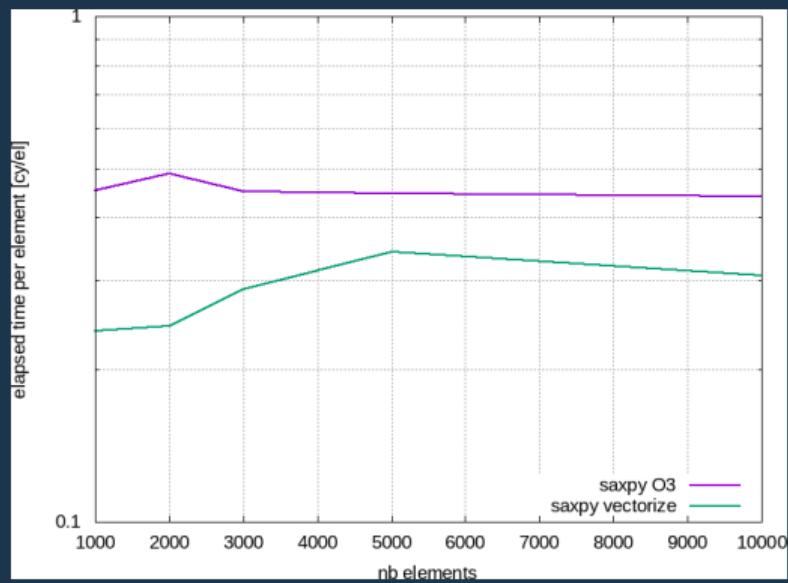

Speed up of **12** between **-O0** and **-O3** or **-Ofast**
